

Alluminio di Qualità is the official distributor for Luxe Coat products in Italy

Alluminio di Qualità has been chosen by Luxe Coat for the distribution in Italy of liquid and powder pre-painted laminate sheets in a wide range of colors, thus becoming the official distributor of a “new” line of Italian manufactured products specifically made for the construction industry (in particular roofs, facades and cladding) and various industrial applications.

The characteristics of the Luxe Coat product line

The products distributed by Alluminio di Qualità feature for a series of reasons: an unlimited range of colors; excellent rigidity and complete uniformity of finish and color, 100% recyclability and a protective film that prevents possible damage during processing.

Alluminio di Qualità: strength in alliances

Alluminio di Qualità, a company of the Cauvin Group, has become a leader in the distribution and processing of flat rolled products in both commercial formats and made to measure, mainly in the 0.5 - 6 mm range of thickness, in different alloys, intended for multiple industrial sectors, in the supply of certified, extruded and pre-processed sheets and plates for the shipbuilding sector and the only centre in Italy specialized in alloy laminates for automotive applications, with a roll and strip system for cutting up to 5 mm alloy and DRY LUBE electrostatic charge lubrication of the material.

With the founding of Metal Link, the offer of industrial semi-finished products in aluminium alloys is now complete, mainly in the over 6mm thickness range, cast, milled and rolled plates, extruded profiles in high value-added alloys destined to the precision mechanics industry, packaging, aluminium moulds, for hydraulics and turning, with disc and strip cutting systems and cutting edge milling machines.

Now, with the new partnership with Luxe Coat (a company of the Spanish group Luxe Perfil that has taken over and revamped Otefal's former varnishing plants), Alluminio di Qualità strengthens its position as a leading Service Centre also for the construction industry.

LUXEPOWDER

High performance powder coated, 0.6 to 3 mm in thickness and up to 1500 mm in width

LUXEPOL

Liquid polyester painted sheets on one or two sides, 0.2 to 3 mm in thickness and up to 1500 mm in width

LUXEPOL HD

Liquid polyamide painted sheets on one or two sides, 0.2 to 3 mm in thickness and up to 1500 mm in width

LUXEPLUS

Liquid pre-painted Kynar 70/30 PVDF sheets, one or two sides, 0,20 to 1,5 mm in thickness and up to 1500 mm in width

LUXESIGN

Polyurethane liquid painted sheets suitable for screen printing on one or two sides, 0.2 to 3 mm in thickness and up to 1500 mm in width

LUXEWALL 2.3

Liquid pre-painted Kynar 70/30 PVDF sheets, one or two sides for continuous facades, 1,95 to 3 mm in thickness and 1500 mm in width
